

功课和练习 第10-6课

解释做加法的方法

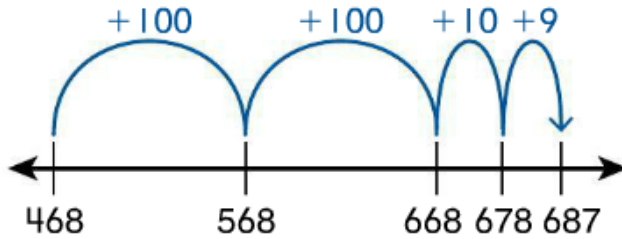

家庭活动 Ask your child to explain how to solve $429 + 378$.

再看！ Find $219 + 468$.

One Way

You can use mental math and an open number line to keep track of your thinking.

You can add numbers in any order.
You can start with 468 and add 219.

Another Way

You can also use paper and pencil to find the sum.
Regroup if you need to.

$$\begin{array}{r} 1 \\ 219 \\ + 468 \\ \hline 687 \end{array}$$

To add 9,
think add 10. Then
subtract 1.

Choose any strategy to solve the addition problem.
Show your work. Then explain your work.

1. $192 + 587 =$ _____

2. $269 + 658 =$ _____

© **MP.2 Reasoning** Choose any strategy to solve the addition problem. Show your work. Then explain your work.

3. $635 + 284 =$ _____

4. $701 + 103 =$ _____

5. **Higher Order Thinking** Explain TWO different ways to find $562 + 399$.

6. © **Assessment** 519 adults are at a fair. 369 children are at the fair. How many people are at the fair in all?

Use the number line to solve. Explain.
